## Easier to provide uncompromising care

With our latest generation of anesthesia workstations, Dräger simplifies processes so you, as a care professional, can enhance the safety of your patients throughout the perioperative care process.

The concept is simple. The components of our workstation – the anesthesia delivery, patient monitoring and IT – all feature a consistent, intuitive user interface so you and your technology can work as one. This consistency extends across our entire anesthesia portfolio, including the Apollo® and Fabius® family. As a result, you can operate the user controls, gas delivery–needle valves and vaporizer controls with ease and confidence, from device to device—whether you're in the OR, cath lab, MRI suite or outpatient center.

For added confidence, our patient-focused anesthesia technology offers you ICU-quality ventilation. This degree of flexibility enables you to care for critical care and trauma patients, without waiting for specialized equipment.

Dräger's unique Low Flow Wizard™ helps guide the use of fresh gas, making it easier to reduce anesthetic agent use and the costs associated with it. Plus, our Pick and Go® system enables continuous monitoring of vital patient parameters on the network, wired or wirelessly. It provides the added assurance of monitored care from pre-operative assessment, to the OR, to the PACU. This solution eliminates the need to detach and reattach leads, expediting transport, minimizing the potential for human error and allowing you and your team to focus on your patient.

For more than a century, we have been working with the anesthesia community, listening, collaborating and observing in the OR. Experience that makes all the difference in creating solutions that help you focus on your patients.

### Enhance patient safety throughout the process

- Consistent, familiar user interface
- ICU-quality ventilation when you need it
- Uninterrupted patient monitoring

“According to a recent ASA closed claims study, human error was a factor in 75% of the incidents analyzed.”

# A consistent user interface wherever you go.

## Easier to get all the information you want

Dräger simplifies the task of creating your custom designed workspace by delivering anesthesia, patient monitoring and IT capabilities in a seamlessly integrated, yet truly open platform. Now your electronic patient information and applications are readily available at your anesthesia workstation for improved transparency.

The interoperability of anesthesia and monitoring data helps you reliably get the information you need, where you need it – at the patient's side.

Our Infinity® Omega Solution brings the power of the PC to the anesthesia workstation. See more information at one time, all arranged and accessed according to your personal preferences. Our flexible workstation also provides the unique ability to view multiple applications of your choosing simultaneously, to further enhance patient care. Plus, our Infinity® C700 display accommodates IT's unique widescreen format, enhancing your viewing options.

The Infinity® C700 display, with its easy-to-configure tabs, provides a convenient window to your patient's electronic medical record, customized to your viewing preferences. Review personal medical histories, images, lab results... everything you're looking for to expedite decisions.

Efficient information management can be a challenge. That's why Dräger provides you with patient information and applications on a single screen to redefine the process – on your terms. There's no need to take your focus off of the patient. At the same time, our Innovian® Anesthesia information management system works with you – from pre-op assessment to the PACU – to create a complete, continuous, paperless record of your patient's anesthetic care.

If you're looking for answers, you need look no further than a Dräger Anesthesia Workstation.

### Work the way you want

- Automatically integrate monitoring and anesthesia data
- See more information at one time
- Host multiple applications, simultaneously
- Access the EMR on your terms
- Access it all without leaving the patient

“Currently, 81% of hospitals surveyed have incorporated or are incorporating an Electronic Medical Record.\*”

## Easier to take care of business

In addition to enhancing your quality of care, we were determined to make it easier than ever for you to address the business of care. That's why we developed our anesthesia workstation on an open platform capable of facilitating implementation and future upgradeability for patient monitoring, anesthesia delivery and IT. Complete with the proven interoperability of three vital systems in one, to achieve exceptional reliability and operating efficiency. And the consistent user interface helps minimize training time, while the transparency of our technology simplifies use.

The ability to automatically capture comprehensive case data from both the anesthesia delivery system and the patient monitor streamlines work flow on multiple levels. The Innovian® Anesthesia data management solution helps you make sure your case documentation is complete, while minimizing the time you spend doing paperwork. It produces comprehensive charge capture to speed billing,

optimize revenue and reduce time spent reconciling files. It also provides the tools to help you efficiently determine best practices in support of cost containment and quality improvement initiatives.

Dräger Anesthesia Workstations also offer single source responsibility for service and support. That adds up to greater convenience, efficiency and peace of mind. Plus, our open platform solution gives you the flexibility to integrate the applications you want, to fully leverage your anesthesia workstation investment over time.

From the patient, to the procedure, to the business of care, the Dräger Anesthesia Workstation is all about making it easier for you to make a difference.

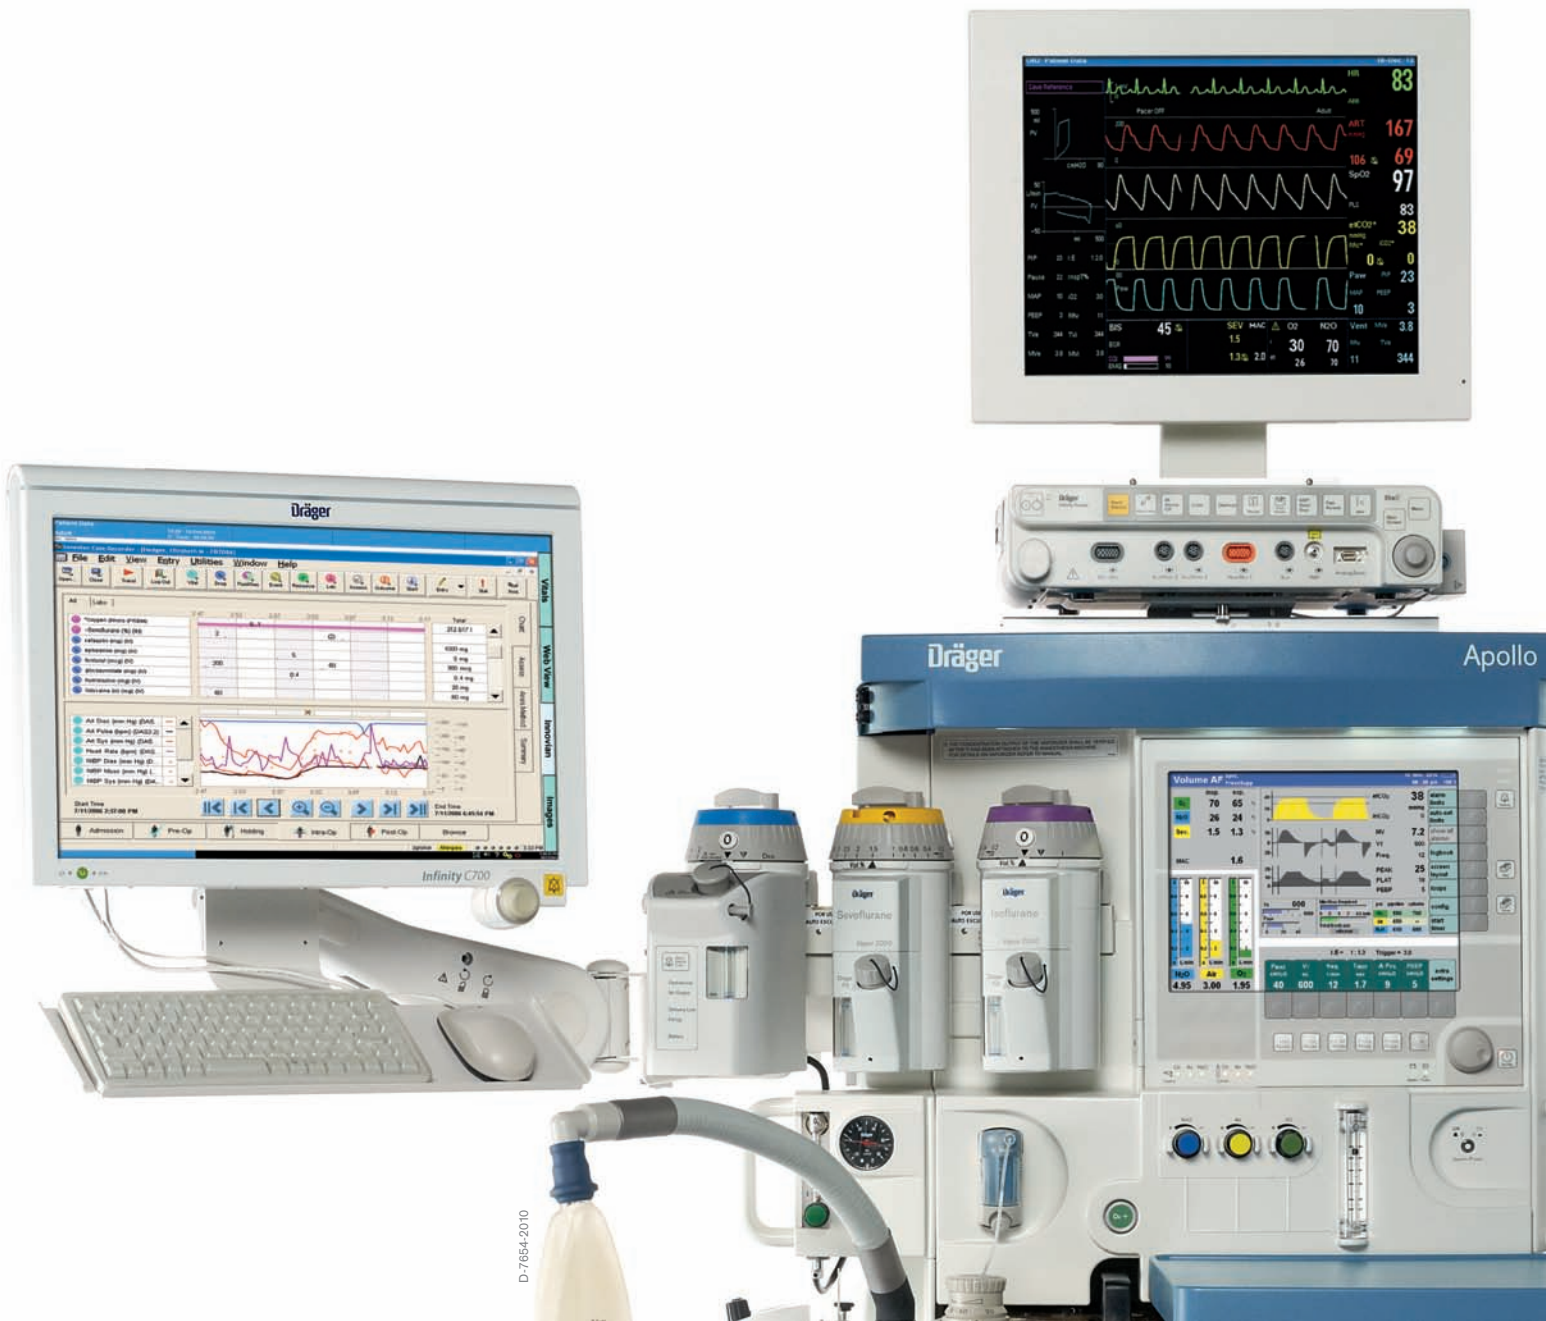

### Your efficiency expert

- Easy to learn, easy to use
- Open platform protects investment
- More time with patient, less time with paperwork
- Expedite billing with charge capture

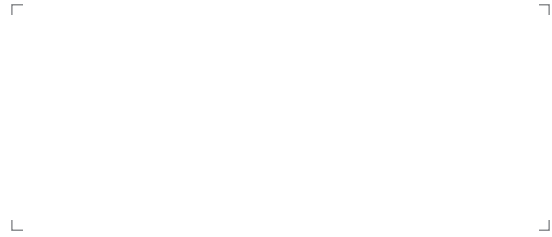

“The OR is the major revenue generator for the hospital, with 68% of revenues coming from surgery.\* ”
